ABSTRACT

5 Multicarrier transmission apparatus 100 receives channel quality information of subcarriers multicarrier reception apparatus 200 and interleave pattern setting section 108 sets an interleave pattern channel quality of subcarriers. according to 10 Interleaver 106 interleaves I components and/or Q components of symbols using the set interleave pattern. As a result, it is possible to optimize diversity gains in modulation diversity modulation/demodulation according to channel quality.
